DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 and 7-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Stolen.

Stolen discloses a device for time division demultiplexing of optical signals (λ_s) having a bit rate on a signal line (512), comprising:

A Raman active medium (530);

A pump source (520) for generating a periodic pump signal (λ_p) having a period B/n where $n \geq 2$; and

A coupler (526) for coupling the optical signal and the pump signal into the Raman medium.

The structure recited above reads on claims 1, 3, 8 and 9.

Claim 2 is taught by column 6, line 42.

The filter of claim 7 is shown by element (532).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and

Art Unit: 3663

the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over
Stolen.

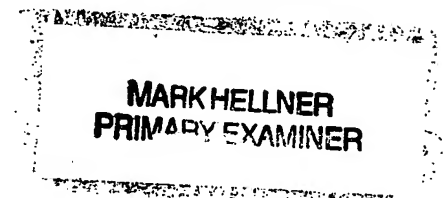

Claim 4 would have been obvious because a person of ordinary skill in the art would have known that Raman pumping of the optical signal would work for any pump wavelength that it within a multiple of the Stokes shift.

Claims 5 and 6 would have been obvious because a delay would have more precisely matched the pump and optical signals.
